Troubleshooting tips

Important Notice

1. Before the installation process, please review the warranty policy and system's owner's manual provided by the PC manufacturer to ensure you follow proper procedures to install your DRAM module.
2. To prevent your module from being damaged by static electricity, please touch an unpainted metal surface on your PC's frame before installation.
3. Wear gloves or an ESD wrist strap when handling.
4. Please do not use this product in a wet environment. Make sure that you are working in a static-safe environment.
5. Do not grab packages; hold only the edge of the Module.
6. Please do not disassemble or reassemble the heatsink; if the product has been disassembled and damaged by the user, all warranties will be void.
7. Please do not insert SPIDER 4/X4 into a DDR5 slot; SPIDER S5/X5 is not backward compatible with the DDR4 module.

Installation Process

Troubleshooting tips

Required Tools & Prepare

- 1, Memory Module(s) and your computer
2. A Screwdriver (For removing the cover on your computer)
3. Your motherboard/computer's owner's manual

Installation Process

- 1, Turn off your computer system.
2. Unplugging the power code from your computer.
3. Remove the computer cover
4. Touch an unpainted metal surface on your computers' frame or use a grounded antistatic wrist strap to prevent electrostatic discharge (ESD)
5. Locate your DRAM Module
This slot is usually easy to find in your motherboard. Please refer to your owner's manual for the exact location, as every system looks slightly different.

Troubleshooting Tips

Troubleshooting tips

1. If you have trouble with your new RAM to boot up your system, check these things first.

- Make sure your system's chipset and CPU support the memory speed and capacity (Please review the system's owner's manual).
- Check the power cords to ensure your motherboard/PC has an adequate power supply.
- Try removing the module and replacing it again.
- Press harder when inserting modules into the memory slot.
- Make sure the notches in your module are lined up with the keys in the slot.
- Ensure the DRAM is correctly seated.
- Try cleaning the dust on the memory module and socket.
